

## WHAT'S NEW IN FAXCOM FOR ISERIES RELEASE 6.4

- **SBMSPLFAXB HAS CHANGED!** Parameters have been removed and new ones added:
  - *FAX#* removed - fax phone number
  - *EMAD* removed – email address
  - *RECP* added – recipients - will allow fax phone numbers, email addresses and/or IFS locations (example: 5084819015;techsupport@wayside.com)
  - *PCFILE* added - the IFS directory and document name you want to attach to your fax/email (example: /Trailer Pages/Invoice Trailer.doc)
  
- Ability to attach a Windows PC document to your fax/email request.
  
- Added email carbon copy and blind carbon copy fields to Faxcom Global Address book.
  
- Email history keeps track of all recipients transmitted to rather than just the last one.
  
- Ability to have more than one email recipient when using a custom address book with the Scan monitor.
  
- Q Manager shows fax numbers and email addresses under the heading of *recipients* rather than separating them into different columns.
  
- API monitor has a new command:
  - *\$ATCPCFILExxx...x\$* - where *xxx...x* is the IFS directory and document name you want to attach to your fax/email request.
  
- SBMSPLFAXB has a new parameter:
  - *PCFILE* - the IFS directory and document name you want to attach to your fax/email.
  
- The following files have new fields:
  - FTQUE
  - FTDIR
  - FTSEC
